

FullStack Developer

Brasil - Full-time

Date Posted	9/15/2026 1:15:59 PM
Seniority Level	Senior (4-6 years)

About the Company

Stefanini Latam Digital is a global leader in technology services, specializing in high-impact nearshoring solutions. We bridge the gap between world-class talent in Latin America and leading enterprises across North America. By leveraging deep technical expertise and cultural alignment, we provide agile, scalable, and cost-effective digital transformation services that drive innovation and operational excellence for our clients.

The Role

We are seeking a skilled FullStack Developer  to join our development team. The role involves designing, implementing, and maintaining end-to-end web applications  that run on both the front-end and back-end, leveraging modern Java  and Node.js technologies. The successful candidate will collaborate closely with product owners, designers, and other engineers  to deliver high-quality features in an Agile environment.

Key Responsibilities

-  Design, develop, test, and deploy full-stack web applications using Java, Spring Boot, and Node.js.
-  Build and integrate RESTful APIs and microservices that interact with MongoDB and other data stores.
-  Implement cloud infrastructure and services on AWS, including compute, storage, and networking resources.
-  Participate in code reviews, pair programming, and continuous integration/continuous deployment (CI/CD) pipelines.
-  Contribute to sprint planning, backlog grooming, and daily stand-ups following Agile methodology.
-  Troubleshoot, debug, and resolve production issues to ensure system reliability and performance.
-  Write clear technical documentation and maintain up-to-date project artifacts.

Job Requirements

-  Minimum 3 years of professional experience as a FullStack Developer.
-  Strong proficiency in Java and the Spring Boot framework.
-  Hands-on experience with Node.js for server-side development.
-  Proven track record working with AWS Cloud services (EC2, S3, Lambda, RDS, etc.).
-  Experience designing schemas and querying data in MongoDB.
-  Solid understanding of Agile development practices and participation in Scrum teams.
-  Ability to write clean, maintainable code and follow best practices for version control (Git).
-  Upper-Intermediate English (B2) proficiency to communicate effectively with international stakeholders.

Preferred Skills

-  Familiarity with containerization technologies such as Docker and orchestration with Kubernetes.
-  Experience with front-end frameworks (e.g., React, Angular, or Vue.js).
-  Knowledge of CI/CD tools like Jenkins, GitLab CI, or GitHub Actions.
-  Understanding of security best practices for web applications and cloud environments.
-  Prior exposure to automated testing frameworks (JUnit, Jest, Cypress).

Personality

A proactive problem-solver  who takes ownership of tasks from conception to delivery. Collaborative team player  comfortable working in cross-functional groups. Detail-oriented with a strong focus on code quality and documentation . Adaptable and eager to learn new technologies and methodologies . Strong communication skills , both written and verbal, to convey technical concepts clearly.

Salary & Benefits

-  This is a full-time position with our client.
-  Payment is handled through local payroll (Nómina).

Software & Tools

-  Java, Spring Boot
-  Node.js
-  AWS (EC2, S3, Lambda, RDS, etc.)
-  MongoDB
-  Git (version control)
-  Agile tools (Jira, Confluence)
-  CI/CD platforms (Jenkins, GitLab CI, GitHub Actions)
-  Docker (containerization)
-  Optional front-end frameworks: React, Angular, Vue.js

Why Join Us?

-  Join a fast-growing tech firm driving innovation with cloud-native solutions.
-  Collaborate in an Agile environment with cross-functional teams to build impactful applications.
-  Grow your skills working with modern technologies like Java, Node.js, AWS, and containerization.
