PROFESSIONAL SUMMARY

Senior Software Engineer with 10+ years of professional experience engineering backend, full-stack, and high-throughput distributed systems across Java, Node.js, and .NET ecosystems. Specialized in business-critical platforms for insurance, billing, payment processing, and complex external provider integrations. Proven track record architecting event-driven microservices, cloud-native deployments on AWS and Kubernetes, and highly reliable asynchronous pipelines. Passionate about remote backend and full-stack challenges focused on high performance, clean architecture, and continuous delivery.

TECHNICAL SKILLS

LANGUAGES & FRAMEWORKS

Java, C#, JavaScript, TypeScript, SQL, Spring Boot, Spring, Node.js, NestJS, .NET Core, ASP.NET Web API

ARCHITECTURE & DATABASES

Microservices, Event-Driven Architecture, REST APIs, DDD, Kafka, SQS, PostgreSQL, Oracle, SQL Server, MongoDB

CLOUD & DEVOPS

AWS (Lambda, SQS), Azure Functions, Docker, Kubernetes, CI/CD Pipelines, Bamboo, Git

FRONTEND & METHODOLOGIES

Angular, React, Agile, Scrum, TDD, Requirements Analysis, System Optimization

PROFESSIONAL EXPERIENCE

Senior Software Engineer | AVLA Brazil

Jun 2021 – Sep 2026

- Architected and delivered scalable backend and full-stack solutions supporting core insurance policies, claims, billing, client onboarding, and payment processing workflows.
- Designed and maintained business-critical microservices and REST APIs using Java and Spring Boot within a high-concurrency enterprise architecture.
- Engineered asynchronous messaging pipelines and event-driven integrations using Apache Kafka and Amazon SQS, significantly increasing message throughput and fault tolerance.
- Orchestrated cloud-native deployments leveraging AWS, Kubernetes, and Docker to ensure system reliability, elasticity, and high availability.
- Optimized complex PostgreSQL and Oracle database queries, identifying operational bottlenecks and boosting overall data processing efficiency.
- Streamlined third-party integrations, connecting internal systems with secure external payment gateways and banking APIs.
- Contributed to continuous integration/continuous deployment (CI/CD) workflows, driving improvements in deployment velocity and operational robustness.

Software Engineer (.NET) | Liberty Mutual Insurance

May 2020 – Jun 2021

- Engineered and maintained mission-critical backend APIs and microservices using C#, .NET Core, and Node.js for automated insurance management workflows.

PROFESSIONAL EXPERIENCE (CONTINUED)

Programmer Analyst | Resource IT Solutions Jun 2018 – Apr 2020

- Delivered customized software solutions across multiple client projects and business domains in fast-paced consulting environments.
- Participated in full-lifecycle software engineering, including requirements gathering, architecture design, coding, unit testing, and production support.
- Partnered with cross-functional Agile teams to adapt client workflows to modern technology stacks and efficient delivery standards.

Back-end Developer | Studica Solution Mar 2018 – Jun 2018

- Engineered core backend functionalities and API endpoints for a video game development startup using Node.js and Microsoft technologies.
- Designed non-relational MongoDB database schemas to support high-throughput real-time game state interactions.

Programmer Analyst | Hundred SAC Dec 2016 – Jan 2018

- Served as an external software engineering consultant for a leading insurance enterprise, delivering tailored management applications.
- Translated complex business demands into scalable code, addressing sector-specific challenges around data security, claims processing, and audit readiness.

Programmer .NET | Mundotek Jan 2016 – Nov 2016

- Developed and maintained software components using C# and .NET technologies across the complete software development lifecycle.
- Debugged, tested, and released feature enhancements while collaborating closely with senior engineering staff.

KEY AREAS & ARCHITECTURE FOCUS

Insurance & Payment Processing Platforms

Designed high-concurrency backend services for policy issuance, automated claims handling, recurring billing, and third-party payment gateway integrations with real-time auditability.

Distributed Systems & Asynchronous Messaging

Built fault-tolerant, event-driven architectures utilizing Apache Kafka and AWS SQS for loose coupling, scalable message consumption, and high availability across microservices.

Cloud-Native & Serverless Architectures

Architected and deployed containerized solutions with Docker, Kubernetes, AWS Lambda, and Azure Functions, integrating automated CI/CD pipelines to accelerate release cycles.

EDUCATION

Information Systems Engineering

Universidade Anhembi Morumbi

Computer Science

CIBERTEC (2016)

LANGUAGES

Spanish: Native or Bilingual

Portuguese: Full Professional

English: Professional Working Proficiency
